

DATE: February 21, 1980

SUBJECT: Potential Hazardous Waste Site Inspection - Olin Corporation,
North Little Rock, Arkansas

FROM: S. C. Yin
Physical Scientist, Ada Branch (6ASAA)

TO: 6ASA

THRU: Dr. Oscar Ramirez, Jr.
Acting Director, S&A Division (6ASA)

THRU: Dr. Ralph D. Harkins
Chief, Ada Branch (6ASAA)

The subject site was used as a landfill for the burial of pesticides wastes, but it has been inactive since 1958 and no records are available. The present responsible company officials know little about the site, and what little information they have was obtained from a few of the old employees at the plant. They know the exact location of four pits that were used, and these are located within a 2.5 acre area.

Since the site has been inactive for over 20 years and there are no known drinking water wells in the vicinity, it does not appear that this site poses any hazard at all.
